

Manufacturing Program

There is not an Individual course in Manufacturing Technology at Sno-Isle Skills Center. A variety of courses expose students to specific MTAG Manufacturing Technology competencies: Welding/Metal Fabrication; Precision Machining; Aviation Technology; Diesel Mechanics; and Electronic Technology.

Students in these courses are taught all phases of the manufacturing process related to their specific industry from planning through final product manufacturing and quality control. They are able to work independently and in manufacturing teams. Students have opportunities to be placed in Internships and paid Work Experiences situations at specific industry sites.

Students may earn credit towards advanced placement through Everett Community College and Lake Washington Technical College. Students may also apply for selection to the Boeing Summer Manufacturing Technology Internship Program through these courses.
